

## TPG ProjectDeputy Project Managers Easily Assign Write Permissions Themselves

In Microsoft Project Server, the permissions system only gives write permissions to the person who has created the project – the 'project owner'. If he or she wants to give write access to other people working on the project, the administrator has to configure it manually. If there are a lot of projects on the Project Server - and in large companies there almost always are - manual configuration becomes more and more confusing and time-consuming. This is where TPG ProjectDeputy can help.

### Compatibility:

Microsoft Project Server 2003

Microsoft Project Server 2007

Select the Project for which you want to define substitute project managers

Project Name: \_\_\_\_\_ Owner: \_\_\_\_\_ Filter

Project Name	Owner	Category	Group	Edit Properties
p1	Dimitri Jakushevich	category for project: p1	group for project: p1	Edit properties
p2	Thomas Dallmair	category for project: p2	group for project: p2	Edit properties
p3	Immo Landwerth			Edit properties
p4	Dimitri Jakushevich	category for project: p4	group for project: p4	Edit properties
Project for Marcel	P12Admin	category for project: Project for Marcel		Edit properties

Select and add the user you want to assign substitute project managers privileges  
Default template that applies for new assigned users: **Project Manager**  
Available users are members of the group: **Administrators**  
Current logged-in user: **Dimitri Jakushevich**

Available users: \_\_\_\_\_

Selected users:  
Dimitri Jakushevich  
Immo Landwerth  
Marcel H  
P12Admin  
Thomas Dallmair

Buttons: Add >, < Remove, << Remove All, View rights of selected user, Save, Cancel

A growing number of companies set up centralized Project Management Offices, which need to give project-specific user permissions to managers for the projects that have been created centrally. Another way TPG ProjectDeputy can be used is to easily specify who is standing in for a project manager while he or she is on vacation.

### The Benefits:

- High flexibility in configuring the permissions system of projects
- Reduces the Microsoft Project Server administrator's workload
- Helps avoiding errors in the permissions system
- Increasing acceptance of the project management solution

### Features At-a-Glance:

- Easy-to-use interface in Project Web Access
- Fully integrated into Microsoft Project Web Access
