

TPG PortfolioManager

Optimal resource utilization due to Easy Portfolio Planning by drag and drop

COMPATIBILITY: Microsoft Project Server and and SharePoint Server 2013 - 2016

When a great idea finally turns into a real, approved project, the first question usually is: Do we have the right resources? TPG PortfolioManager is the perfect tool for Project Portfolio Management with Microsoft Project and other planning tools. The tool allows you to aggregate the data from new and current projects at the project level and show each of them as a task. This gives you a comprehensive overview of all projects in a single bar chart.

Below the bar chart, a dialog box displays several resource histograms summarized by department alongside a line representing maximum capacity. Current and new projects are shown in different colors. With TPG Portfolio Manager to adjust the resources plan, you simply drag and drop the project tasks in the view until the resource peaks are below the overload level. This enables you to test resource simulations quickly and save the results of different variants.

THE BENEFITS:

- ▶ Manual ad-hoc optimization of resource and budget utilization by simple drag and drop
- ▶ Graphical simulation of the current state of projects and immediate view of the impact on the resources involved
- ▶ Summary of all project data in an easy-to-read diagram

FEATURES AT A GLANCE:

- ▶ Simultaneous display of consolidated project schedules (one bar per project) along with several consolidated histograms
- ▶ Report various portfolio resource summaries – by department, by subsidiary etc.
- ▶ Highly configurable graphics (bars and lines)
- ▶ Data for new projects can be taken from any SQL-based source and information about current projects comes from the Project Server
- ▶ Different simulation results can be saved
